## Near infrared SMD LED

# MINI LED

“Complex skin problems, please use 4in1 near-infrared SMD LED light to solve”

## Near infrared SMD LED

MINI LED is an LED machine that USES LED light to solve skin problems. Irradiation of 420nm-640nm with various specific wavelengths can solve skin problems such as skin regeneration and sedation. Excellent high intensity special near infrared (nir) SMD LED elements are used to achieve excellent results and improve the risk of thermal damage, photoaging and trauma of general laser treatment problems. Plus MINI LED is a very safe LIGHT source to irradiate the machine without pain treatment.

### Red LED

Rejuvenation  
Lighten wrinkles and acne marks

### Orange LED

Decomposition stain  
& Improve fine lines

### Yellow LED

Improve erythema  
and redness

### Green LED

Deep repair & White  
skin rejuvenation

### Cyan LED

Calm skin &  
Balance secretion

### Blue LED

Balanced secretion &  
Control grease

### Purple LED

Repairing acne &  
Lightening spot

# PDT

## DT(Photo Dynamic Therapy) light Therapy

MINI LED is used for the treatment of various skin diseases such as herpes zoster, atopic dermatitis, skin regeneration, anti-acne bacillus, and pain relief. One of the most effective clinical is to treat the wound. The inflammation of herpes zoster was recovered faster than 20% and pain was reduced by more than 30%. The 640nm Red light LED light is to promote the activation of mitochondria of collagen and energy substances in cells to help skin regenerate, normalize blood circulation and relieve pain to suppress inflammation.

# LLLT

## LLLT(Low Level LED Therapy)?

MINI LED is a 287 special near-infrared SMD LED LED machine. LL is short for Low Level LED Therapy, which means Low Level LED Therapy. The high power laser is focused on the local area to treat, compared with the LED of LT, which can treat a wide range of areas with appropriate light power. The LED light source is due to a narrow wavelength bandwidth, which gives off light at a specific wavelength. UV U, which is harmful to the skin, and infrared ?, which is not required, do not give off side effects.

1. Purple LED(360–430nm)
2. Blue LED(430–455nm)
3. Cyan LED(455–492nm)
4. Yellow LED(550–580nm)
5. Green LED(492–550nm)
6. Orange LED(588–647nm)
7. Red LED(647–760nm)

# Principle of Hydrogen Therapy

## 1) High Concentration of Hydrogen Element Water

- ① The maximum hydrogen dissolution rate is 1600 ppb.
- ② It is a high concentration of hydrogen water over 1500–1600 ppb.
- ③ Conversion of Drinking Water (Mineral Water) into Hydrogen Element Water Generator.

## 2) Ultrasonic fine spray

- ① The use of 110KHz ultrasound produces nanoscale spray, also called mist spray.
- ② Small water particles penetrate deep into the skin, because of high absorption, will not lose nutrients, very comfortable.
- ③ The average pore size is 25 nm, the water molecule size is 0.4 nm, and the absorption rate is very fast.

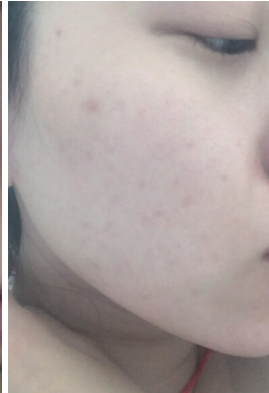

Hydrogen dissolution rate is 1600 ppb of high concentration hydrogen element water, which effectively removes reactive oxygen species from the body to fight free radicals, helps the human body to carry out anti-acid management (176 times as much as VC), and discharges the body in the form of water (sweat), so as to achieve the therapeutic effect!

# Complex skin problems

Please use the 4n1 near infrared SMD LED light to solve it

MINI LED red,blue,green,and yellow wavelengths can solve various skin problems using near-uv SMD LED LIGHT for safety management.

“see the excellent MINI LED for yourself”

## SAFE

Irradiate near infrared SMD LED light with no pain can solve problematic skin!

## SMART

Through the 4 in 1 equipment n1 near infrared SMDLED light can use all kinds of skin care.

## EFFECTIVE

Sebaceous glands that damage the cause of skin problems prevent recurrence.
