1.Overview

MagicCurve is the most popular fitness instrument for muscle building and fat losing, which can replace all the muscle building and fat losing treatment in salon, with easy operation it provides body shaping solutions for the users after slimming. MagicCurve promotes the continuous expansion and contraction of body muscles by stimulating the nerves, completing the passive and ultimate training of muscles, which enables deep remodeling of muscles, the growth of myogenic fibers (muscle enlargement), generation of new collagen chains and muscle fibers (muscle hyperplasia), thus training and increasing muscle density and volume. This instrument is safe and effective, without side effects.

2.Precautions

- 1.This instrument is guaranteed by the designated after-sales service unit.
- 2.Use this product at ambient temperatures between 16°C and 35°C, do not place the instrument in a high-temperature environment, as this may affect the service life of the instrument and the normal use.

4. Technical parameters

Product name: MagicCurve

Product model: WL-EMT96Pro

Shell material: ABS

Handle material: ABS

Screen size: 7 inches

Magnetic Induction: 3 Tesla

Packing dimensions: 525*520*240mm

Product weight: 7.3kg

Package weight: 8.5kg

Input voltage: 110V/220V 50~60Hz

Rated power: 520W

Product Dimensions: 515*323*245mm

5. Packing list

1

Main unit * 1

2

MagicCurve handle*1

3

Strap*1 set

4

Power cord * 1

Note: please check the instrument and its accessories or attachments before use, and remove all packaging materials after confirming that they are complete.

6.Introduction for Use

Power button on the front side of the main unit.

Connect the power and press power button.

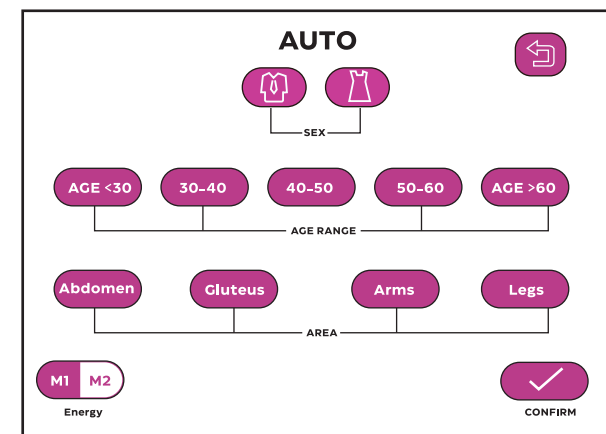

Auto mode

Manual mode

1.Auto mode interface

Set the user's gender

Set the user's age

Set the treatment area

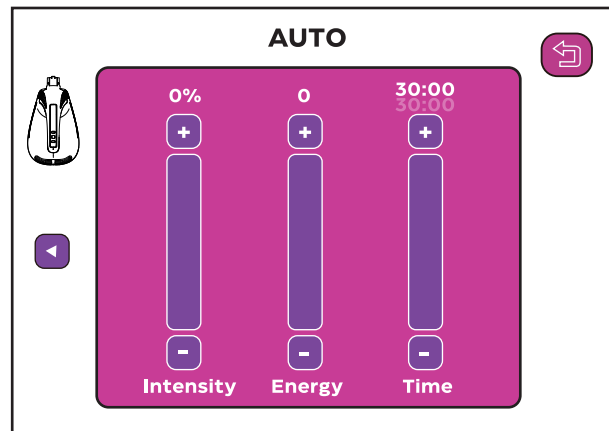

M1: Both functions work simultaneously
M2: Two functions work alternately

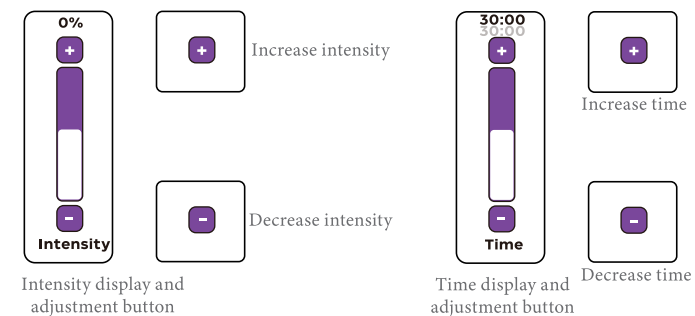

Return to the previous interface

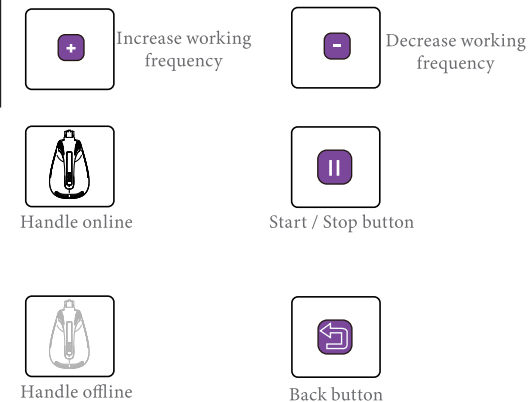

Confirm

2. Manual mode interface

Switch the cycle time of each working mode and frequency adjustment.

3.Alert interface

Voltage too low

Abnormal output of voltage

The handle temperature is too high

Voltage too high

4.About the handle

The handle will automatically stop working once it is placed directly on the main unit.

How to DIY your treatment?

1. When you click the "manual" button, you can see the DIY interface.
2. Please set the energy, working time and frequency.
3. You can set 3 independent working modes in "F1, F2, F3", the machine will work in the order of "F1, F2, F3" according to the established program cycle until the end of the total treatment time.

For example

We set the energy, working time and frequency as shown in the picture.

1. The machine will work at 70% intensity during the whole treatment.
2. The system will work according to the set data of F1 for 1 minute at 27Hz, after the working time of F1, the system will work according to the set data of F2 for 3 minutes at 5HZ, after the working time of F2, the system will work according to the set data of F3 for 5 minutes at 20Hz.
3. After the working time of F3 is over, the machine will work again in the sequence of F1, F2, F3 until the 30 minutes treatment time is over.

7.Troubleshooting

1.Instrument fails to turn on?

- A.Check if the power cord is connected to a valid wall socket.
- B.Please check the fuse is loose or broken, the fuse installed around the socket of power cord (refer to the fuse replacement procedure in the Installation step).
- C.If the above methods don't work, please contact the dealer for assistance.

2.No energy output from the instrument?

- A.Check if the handle is well connected with the main unit.
- B.Check whether the treatment area has been cleaned, grease or oily essential may cause poor contact between treatment head and human body, resulting in no energy output.

3.The instrument succeeded in starting up, but an error message appeared on the screen?

- A.Please unplug the power cord, and wait for 1 minute before plugging in the power cord again and restart the instrument.

If the above methods don't work, please contact the dealer for assistance.

4.On screen pops up "voltage too low" alert?

- A.Try to restart the instrument, If the alert still exists, please contact the dealer for assistance.

5.On screen pops up "Abnormal output of voltage" alert?

- A.Try to restart the instrument, If the alert still exists, please contact the dealer for assistance.

6.On screen pops up "The handle temperature is too high!" alert?

- A.Power off the instrument and wait for 20 minutes to cool down the handle before restart using it.
- B.If the alert pops up again in 30 minutes, please contact the dealer for assistance.

7.On screen pops up "Voltage too high" alert?

- A.Please contact the dealer for assistance.
